## **CLAIMS 1-6 ARE PRESENTED FOR EXAMINATION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to a method of treating rheumatoid arthritis, classified in class 514, subclass 461+.
- II. Claim 6, drawn to a method of identifying an agent that selectively inhibits EP4 activity in vivo, classified in class 436.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not capable of use together, have different effects and different functions. Group I relates to a method of treating a medical disorder with claimed compounds and Group II relates to identification of compounds which would not be within the compounds claimed in Group

The inventions are different since they have acquired separate status in the pharmaceutical art as indicated by the classification in various classes. This would cause a burden on the examiner in the required search.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1617

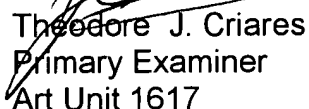

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
